

Part 1, Paper 23, The Solitary Messengers, Divine Counselor

📅 Wed, Oct 02, 2024 2:20PM 🕒 13:33

SUMMARY KEYWORDS

solitary messengers, cosmic roles, Infinite Spirit, paradise Trinity, havona circuits, super universes, local universes, explorers, special assignment, revelators of truth, Vice Garrington, sons of destiny, cosmic connection, universal evolution, cosmic mystery

SPEAKERS

John, Sarah

John 00:00

Ever feel like you do your best thinking solo, like you need that quiet space that disconnect from the world to really connect with your thoughts?

Sarah 00:07

Yeah, I know what you mean.

John 00:08

Well, imagine that on a cosmic scale. We're diving into the Urantia Book today and its take on beings called solitary messengers. And trust me, their need for me time is Nick XT level. Oh, yeah, these

Sarah 00:20

guys are interesting. It's not just me time. It's fundamental to their existence. These beings, they're woven directly from the energy of the Infinite Spirit. Think of it as being hardwired into the universe's operating system before most of the universe even existed. Okay,

John 00:35

talk about being the original cosmic employee. They predate the break room gossip, that's for sure, but it's not like they're slacking off, right? What are these solo acts responsible for?

- S** Sarah 00:45
Well, their work, it's so deeply connected to the universe's source code that being near another being causes interference, like a cosmic short circuit. This begs the question, what kind of work requires that level of solitude? All
- J** John 00:59
right, you've officially piqued my curiosity. Give me the cosmic job description. The
- S** Sarah 01:03
Urantia Book lays out seven categories of solitary messengers, each with a unique function in the grand scheme of things, seven,
- J** John 01:10
okay, get ready for a cosmic resume unlike any other. Hit me with number one.
- S** Sarah 01:16
First, we have the messengers of the paradise Trinity. Okay, imagine handling the most classified Intel in existence. We're talking about the inner workings of the Father Son and the Infinite Spirit, the ultimate cosmic power trio. Whoa. So
- J** John 01:28
not just any intergalactic memo, these are the beings entrusted with the secrets of creation itself. Are we talking cosmic spies, diplomats on a universal scale? The book
- S** Sarah 01:40
is fascinatingly vague on the specifics, but the level of trust implied is staggering. If the Infinite Spirit created them first and tasked them with this, it speaks volumes about their capability and loyalty. Makes
- J** John 01:53
you wonder if they ever get Employee of the Month awards, and what about those times when even a solitary messenger needs a little backup. That's

S Sarah 02:01

where it gets really interesting, because next we have the messengers of the havona circuits. Now picture this havona, the Central Universe, a realm so harmonious, so perfect, that most beings can only dream of experiencing. It sounds like

J John 02:17

my kind of place, minus the whole no other beings allowed rule, exactly,

S Sarah 02:20

but solitary messengers, they have the cosmic clearance to not only enter hivona, but to find genuine connection with its residents. Wait,

J John 02:27

hold up these beings who are practically allergic to company. They find solace in havona. That's pretty big deal, right?

S Sarah 02:34

It suggests a resonance, a meeting of minds that even the Urantia Book struggles to describe. It's as if their solitude finds its perfect counterpoint in the unified harmony of havona.

J John 02:46

Okay, now we're venturing out of the Central Universe, because Next up are the messengers of the super universes. And things are about to get really grand in scale. Imagine

S Sarah 02:55

being responsible for communication, not just across planets or galaxies, but across entire super universes, wow, they're the couriers of information that even gravity can't handle, the invisible threads connecting The Fabric of the Cosmos. Talk about

J John 03:09

a demand and commute I can barely handle rush hour traffic, let alone intergalactic travel. So we've got the super cosmic scale, but then we also have the messengers of the local universes. Right? What do these more local messengers do. Don't

S Sarah 03:21
let the term local fool you. A local universe still encompasses billions upon billions of stars. These messengers act as the eyes and ears of the universe's mother spirit, carrying out tasks vital to its very existence.

J John 03:35
Okay, so still a pretty big deal. What kind of task are we talking about?

S Sarah 03:39
Imagine having your finger on the pulse of an entire universe, sensing a supernova about to go off and warning nearby civilizations relaying news of newly evolved life forms. These messengers ensure the smooth operation of a system of unimaginable complexity.

J John 03:57
It's like they're running a cosmic Postal Service delivering vital information instead of holiday cards, but instead of fragile Handle with care, it's more like entire star system at stake. Don't mess this up

S Sarah 04:06
an apt analogy, although I suspect their tasks are considerably more nuanced than your average intergalactic package delivery.

J John 04:13
I'd hope so. But this next category, this one, really speaks to the explorer in me. Tell me about the explorers of undirected assignment.

S Sarah 04:21
These are the cosmic pioneers, the ones who chart new worlds and discover galaxies yet to be fully formed. Wow. They embody that innate human desire to explore the unknown, but on a scale that boggles the mind

J John 04:35
and the undirected part. Does that mean they're just out there, winging it? Not

S Sarah 04:39
quite. They may not have specific destinations, but they're guided by a deep intuition, a cosmic compass that leads them to where they're needed most.

J John 04:47
So even their free time is spent pushing the boundaries of what's possible. Talk about dedication, but there are even more specialized roles, right?

S Sarah 04:54
Indeed, we have the ambassadors and emissaries of special assignment. Think of them as. Universe's diplomats dispatched when time is of the essence,

J John 05:03
because when you need a treaty negotiated between warring star systems or a rogue black hole talked off the ledge, you call in the experts precisely.

S Sarah 05:11
But unlike your average intergalactic diplomat, these messengers don't have to deal with travel delays or jet lag. They can traverse unimaginable distances almost instantaneously. Now that

J John 05:23
is a superpower I could get behind. No more waiting in line at customs for this guy. Okay, we've covered six out of the seven categories, and I have to say my mind is already sufficiently blown. But I have a feeling this last one is the real showstopper. Tell me about the revelators of truth. Now

S Sarah 05:39
this is where things get particularly intriguing. These are the messengers entrusted with spreading knowledge, perhaps even glimpses of the divine plan itself.

J John 05:47
Okay, now we're talking, but hold on, if these are universal truths, who are they revealing them to? And how? I have so many questions. It's like they're handling the universe's most precious wisdom, but the delivery method is shrouded in mystery. I'm on the edge of my seat here,

S Sarah 06:04
and perhaps that's for the best. Imagine trying to teach a goldfish quantum physics. Some truths are just beyond our current comprehension.

J John 06:13
Okay, good point. It's like trying to explain the Internet to someone who lived before electricity just not going to compute Exactly.

S Sarah 06:19
The book suggests that receiving certain truths prematurely could be detrimental, even dangerous. It's about timing and readiness, which

J John 06:27
makes me think about these messengers themselves. They experience time and space so differently from us. How do they even do that? They're individuals, yet they can travel at speeds that make light look like a snail. Even

S Sarah 06:38
the urentia book struggles to explain it in terms we can fully grasp. They use phrases like synchronizing with universal currents and transcending material limitations. Yeah, that sounds

J John 06:50
a little like something you'd find on a cosmic fortune cookie. True.

S Sarah 06:53
But then they offer this intriguing analogy. Imagine a thought traveling across a room. It's not bound by physical laws, yet it arrives instantly impactful real maybe that's the closest we can come to understanding how a solitary messenger moves.

J John 07:09
It's like they're tapping into a different kind of highway system, one that bypasses all the cosmic speed limits, which honestly makes my commute even more unbearable. But I digress, we've talked about how these messengers function solo, how they experience the universe

differently, but it's their ultimate purpose has really got me thinking they're alone, yet they're holding the universe together.

S

Sarah 07:30

It's a beautiful paradox, isn't it? They challenge us to reconsider our understanding of connection. What if true belonging starts with embracing our individuality, our unique place. In the grand scheme of things, it's like

J

John 07:43

each messenger is a unique instrument, and their solitude allows them to contribute their specific note to the cosmic symphony. But

S

Sarah 07:51

wait, there's more, right? There was something about a place called vice guarington. Ah,

J

John 07:55

yes, Vice grington. Even the Urantia Book treats this location with an air of mystery, like it's

S

Sarah 08:01

the cosmic equivalent of a top secret government facility. But instead, area 51 it's vice garrington.

J

John 08:07

This mysterious world is where solitary messengers are being sent, permanently assigned to these beings called sons of destiny. Sons

S

Sarah 08:13

of destiny. Okay, now things are getting really interesting. Who are these VIPs, and what makes them so special? We don't know, and that's the most fascinating part. The text itself speculates, wondering if this is a glimpse into the future of the universe, a cosmic training ground for something beyond our current understanding. Wait.

J

John 08:32

So the messengers are being sent there on a need to know basis. And apparently no one knows

so the messengers are being sent there on a need-to-know basis. And apparently no one knows what happens next. This is like a cosmic cliffhanger,

S

Sarah 08:40

precisely, and it challenges us to consider the sheer scale of the universe and its workings. We're

J

John 08:45

talking about forces and timelines that make our human understanding of time seem like a blink of an eye. But it makes you wonder if even the authors of the Urantia Book are baffled by Vice Carrington, what does that mean for us? Are we meant to simply marvel at the mystery,

S

Sarah 09:00

perhaps, or maybe it's an invitation to keep asking questions, to never stop exploring the possibilities, no matter how mindboggling they may seem.

J

John 09:08

It's like we've been handed a puzzle box, but we're missing a few pieces, and maybe we're not even supposed to have all the pieces yet. But that doesn't mean we can't appreciate the complexity, the beauty of what we're seeing exactly,

S

Sarah 09:19

and sometimes the most profound truths are found not in the answers, but in the act of seeking itself. Speaking

J

John 09:27

of seeking, I have a feeling some of our listeners might be wondering what this all means for them. It's easy

S

Sarah 09:32

to feel small when contemplating beings with such a vast scope of existence, but remember, even a solitary messenger started somewhere, created

J

John 09:40

from the same energy that flows through us, through everything in the universe. So maybe the

from the same energy that flows through us, through everything in the universe. So maybe the real takeaway here isn't about understanding the intricacies of every cosmic role or deciphering every mystery,

S

Sarah 09:52

but about recognizing our own potential for connection, for purpose, for contributing something meaningful to the universe, even. Even within our own spheres of influence. It's

J

John 10:01

like that quote Be the change you want to see in the world, but on a universal scale, instead of trying to wrap our heads around the entire cosmos, maybe the real challenge is figuring out our own unique role to play, because whether we realize it or not, we're all part of this grand cosmic tapestry, and who knows, maybe our seemingly insignificant actions have ripples we can't even begin to comprehend christly.

S

Sarah 10:24

Every thought, every action, every connection we make, has the potential to influence the universe in ways we may never fully understand.

J

John 10:31

Okay, that's both incredibly humbling and incredibly empowering at the same time. But before we get too lost in the existential implications, there was one detail from the Urantia Book that really stuck with me. It was about how these solitary messengers, for all their power and cosmic significance, aren't infallible. They're not these perfect, untouchable beings. They experience challenges, setbacks, even failures. It's kind of reassuring, actually, even with cosmic powers, it's still a journey, not a perfectly executed itinerary. It makes all this feel a bit more relatable. You know,

S

Sarah 11:04

absolutely and it speaks to a universal truth. Wouldn't you say we're all works in progress, always evolving, learning and hopefully becoming something even greater than we were before? Which

J

John 11:15

brings us back to those solitary messengers, if even they are still learning and growing. What does that tell us about the nature of the universe itself? It's not some static, unchanging thing, is it not

S

Sarah 11:24

at all. The Urantia Book paints a picture of a dynamic, ever evolving Cosmos where growth and change are woven into the very fabric of existence, and these messengers, even in their solitude, are active participants in that evolution.

J

John 11:40

So it's not just about delivering messages or maintaining order, it's about being part of something much grander, something that's constantly unfolding and revealing new layers of complexity,

S

Sarah 11:50

exactly, and perhaps that's the biggest takeaway from this deep dive into the Urantia Book. It's not about having all the answers, but about embracing the mystery, the wonder and the endless possibilities that come with being part of a universe that's always evolving. It's

J

John 12:05

like we've spent this entire episode talking about solitary messengers, but in a way, they're revealing just how connected everything truly is, right? Precisely

S

Sarah 12:12

their existence, their roles, their very solitude, highlights the interconnectedness of everything in the cosmos. It's a beautiful paradox, and one that invites us to look beyond the surface and appreciate the intricate web of relationships that bind us all.

J

John 12:29

So as we wrap up this deep dive, I'm left with a sense of awe, a touch of cosmic vertigo, and a whole lot of new questions to ponder, as

S

Sarah 12:37

it should be, because the search for knowledge is a journey without end, and the more we learn, the more we realize how much more there is to discover. Like

J

John 12:44

the Urantia Book has given us a glimpse beyond the veil, and now we're left with this insatiable curiosity, this desire to see what else is out there. And

curiosity, this desire to see what else is out there. And

S

Sarah 12:52

who knows, maybe, that curiosity, that thirst for knowledge, is its own form of cosmic connection, a reminder that we're all part of something much bigger than ourselves, all seeking understanding, all striving to make sense of this extraordinary universe we find ourselves in. Beautifully

J

John 13:06

put so to our listeners as you go about your day, maybe consider this, if you were a solitary messenger, what corner of the universe would you be drawing to explore? What truths would you dedicate yourself to understanding, even if it meant embracing a life of solitude. Keep those questions alive, keep seeking and keep looking up at the stars. You never know what wonders you might discover within yourself and in the vastness of the cosmos, until next time, happy exploring you.
