

Part 1, Paper 29, The Universe...er Directors, Universal Censor

📅 Wed, Oct 02, 2024 2:20PM 🕒 13:28

SUMMARY KEYWORDS

universe power directors, cosmic energy, semi-material beings, supreme power directors, master spirits, power centers, energy manipulation, living mechanisms, 30 energy types, master physical controllers, mechanical controllers, energy transformers, primary associators, secondary dissociators, unqualified absolute

SPEAKERS

Sarah, John

J John 00:00
We're getting in some pretty heavy stuff today, at least cosmically speaking. You know, most people, when they think about the universe, they think stars, planets, maybe black holes, if they're feeling adventurous, right, right? But we're going deeper than that today, like way deep. Yeah, way deeper. We're talking about the forces that hold everything together, the the energy behind it, all the

S Sarah 00:21
the unseen machinery of the cosmos. You could say exactly.

J John 00:25
And to do that, we're diving into some fascinating excerpts from the Urantia Book, specifically paper 29 we're gonna try to unlock a cosmic mystery, the universe power directors. Ever heard of them?

S Sarah 00:39
I have to admit, even for someone who's well, let's just say, pretty familiar with these kinds of topics, the universe power directors don't get a lot of air time, but maybe they should, because what they do is, well, it's pretty mind blowing when you really think about

—

J John 00:51
it, and that's what we're here for, to think about it, to unpack it. So give us a taste. What makes these power directors so different from say, the angels and spirits we usually hear about.

S Sarah 01:02
It's not just that they manage energies, which is a pretty big deal in itself. It's the scale they operate on. Think galaxies, dimensions, things that make even the most advanced human technology look like. Well, let's just say child's play.

J John 01:16
Okay, now I'm really intrigued. And the book mentions, I think that there are actually three groups involved in controlling these cosmic forces, like some sort of universal energy Consortium. You're

S Sarah 01:26
right. It does mention three, but for today's deep dive, we're focusing on the third group, the universe power directors. Because honestly, even in the grand scheme of cosmic mysteries, these beings are something else. All right,

J John 01:38
you've successfully piqued my curiosity. Lay it on us. What makes these humorous power directors so special?

S Sarah 01:44
Well, for starters, they're described as semi material, a blend of the physical and the spiritual. Imagine something that exists in both realms simultaneously, bridging a gap we usually consider unbreachable. That's the kind of existence we're

J John 01:59
talking about here. Okay, hold on, my brain just did a backflip trying to picture that semi material. So they're like, What sending telepathic memos while also attending intergalactic board of meetings. Laughing.

S Sarah 02:09
Hey, I don't claim to have all the answers, but the urentia book definitely paints a picture of beings that defy our typical categories and their organizational structure. That's a whole other

beings that defy our typical categories and their organizational structure. That's a whole other level fascinating. It starts with the seven supreme power directors.

J John 02:23

Seven. That number seems to pop up a lot in these cosmic discussions. It

S Sarah 02:27

does, doesn't it? And there's a reason for it. These seven supreme power directors, they're directly connected to the seven master spirits, you know, those beings who played a pretty big role in the initial creation of the grand universe. Okay, we're

J John 02:41

talking heavy hitters here, the original cosmic architects and these power directors answer to them. That's quite a chain of command,

S Sarah 02:49

it is. And if that's not enough, below them, you have a network of beings called supreme power centers. And get this, billions upon billions of them. We're talking a number larger than the entire population of Earth, probably multiplied by, I don't even know, a million. It's almost impossible to wrap your head around it.

J John 03:06

Wow. So billions of these power centers, yeah. What are they actually doing?

S Sarah 03:10

Each one, and this is what's so amazing, has a specific responsibility, a designated area within this vast, unfathomable, grand universe. They're like the ultimate cosmic managers making sure everything runs smoothly. So we've got

J John 03:25

the big bosses, the seven master spirits, and then their management team, the supreme power directors, and then this incredible network of power centers spread throughout the universe, each managing their own little, or not so little, corner of existence. It's like the universe's own energy grid, but infinitely more complex than anything we could even dream up.

S

Sarah 03:44

That's a great analogy, a cosmic energy grid constantly buzzing with activity, and these power centers aren't just overseeing it, they're actively managing the flow, making sure everything is balanced, harmonious, constantly.

J

John 03:55

You say, sounds like a tough job. No time for cosmic coffee breaks, I guess. But it makes you wonder, who are they ultimately accountable to? I mean, we've got these master spirits, but what about the Creator sons? You know, the ones who are responsible for creating planets in life as we know it? Do they have any say in how this energy is managed? That's

S

Sarah 04:16

a that's a really good question, and it gets to the heart of what makes these power directors so unique? The Creator sons, powerful as they are, they don't actually have authority over the power directors, really? Nope. Their authority comes directly from the master spirits, a direct line that, to me, speaks volumes about the the essential nature of what they do. It's like, I don't know. Think of it like this. You have the architects who design a magnificent city, right? But then you have the engineers who make sure the power grid works, keeps the lights on, keeps it all running exactly both essential, but operating on totally different levels, different

J

John 04:50

levels of responsibility, that's for sure. So these power directors, they're answerable to the cosmic architects, the master spirits, but not necessarily. The ones who create the planets and life itself. That's fascinating, but it still makes you wonder, what exactly are they doing with all this energy? Now

S

Sarah 05:10

we're getting to the good stuff. See, this is where the Urantia Book, it gets really specific, and I'm telling you what it describes. It makes our human understanding of physics look like, well, a child's drawing of a star. Okay, you

J

John 05:22

can't just drop a tantalizing tidbit like that without giving it the details. What are we talking about here? Wormholes, quantum entanglement, some kind of cosmic energy drink we haven't discovered yet.

S

Sarah 05:31

It's even wilder than that. Okay, so the power directors and their network of power centers

it's even wider than that. Okay, so the power directors and their network of power centers, they don't actually create energy. They don't no, and here's the real kicker, they don't even really mess with gravity, except to, like, resist its pull if they need to. What they do is they manipulate, they modify, they directionalize, the energies that are already present throughout the universe. So

J John 05:52

they're more like dot cosmic energy conductors. They take these raw fundamental energies and kind of shape them, direct them to power entire galaxies. That's

S Sarah 06:01

a great way to put it. There are masters of energy manipulation on a scale that we can barely comprehend.

J John 06:07

That's incredible. But how do they actually do that? Do they have some kind of, like, interdimensional toolbox we don't know about? I

S Sarah 06:15

wish? No, the book describes their methods as a combination of and this is where it gets really interesting, innate ability, and something it calls living mechanisms. Living

J John 06:24

mechanisms, yeah,

S Sarah 06:26

imagine structures so vast, so complex, that they make entire galaxies look like, I don't know, specks of dust, but they're not just machines. They're infused with a life force responsive to the power director's will.

J John 06:39

Okay, hold on. So we're talking about technology, if you can even call it that, yeah. So advanced. It's practically indistinguishable from life itself, exactly.

S Sarah 06:49

 Sarah 06:45

It's this incredible blend of the physical and the, I don't know, the something else. There's

 John 06:55

something else, yeah, but with all this talk about energy, what kind of we even talking about here? Is it like the electricity we use, or something even weirder, and how much are we talking about? You are

 Sarah 07:05

not ready for this. The Urantia Book says that the power directors get this, they work with 30 different types of energy,

 John 07:12

30, seriously, 30? I can barely name three, right?

 Sarah 07:16

We've barely scratched the surface with our solar panels and wind farms, and the book only gives us hints about the true nature of most of these energies. Some of them, it says are completely unknown to us here on Earth,

 John 07:28

unknown. You mean there are forces, energies out there that we haven't even dreamt of yet. That's

 Sarah 07:33

what it seems to suggest, energies that exist only in the deepest reaches of space, or maybe even beyond our current understanding of the universe. Imagine the forces that power the creation of black holes or the expansion of the universe itself. We're talking about stuff that would make Einstein's hair stand on end. It's

 John 07:51

mind boggling to say the least. So they're working with these 30 types of energy, using their living mechanisms to what shape and direct them. But they're not actually creating the energy, right? They're

S Sarah 08:01
master manipulators, not creators. They refine, they direct, they make sure it all flows smoothly and harmoniously throughout the cosmos. It's less about brute force and more about, I don't know, and almost unimaginable level of precision and finesse. It's

J John 08:16
like they're conducting a symphony of energy with like entire galaxies as their instruments. Now

S Sarah 08:21
you're getting it. It's this beautiful, intricate dance of energy that's happening all around us all the time.

J John 08:26
So we've got the power directors, the power centers, this incredible energy grid. But who's actually out there doing the heavy lifting, so to speak. The book also mentions a more dot, mobile workforce, right? The ones making sure all this cosmic energy is flowing where it needs to go. Ah, you're talking

S Sarah 08:42
about the master physical controllers. They're the ones who take the power director's grand vision and translate it into action, the ones on the ground making sure everything runs smoothly. And

J John 08:52
I'm guessing these master physical controllers, they're not your average cosmic temp workers, right? The Urantia Book actually gets into some specifics about who they are, what they do, like different departments, different skill sets. Oh,

S Sarah 09:05
absolutely. And their job titles alone are straight out of a cosmic adventure. We've got associate power directors. Those are the ones who make sure the right controllers are in the right place at the right time. Think of them like cosmic air traffic controllers, but instead of planes, they're directing the flow of energy between galaxies. And

J John 09:22

J John 09:22

then there are the mechanical controllers. Now, those sound like the ones who could really pack a punch, right?

S Sarah 09:27

They do. They're the ones who, well, for lack of better term, get their hands dirty. The book talks about them being able to actually manipulate gravity. Imagine being able to help a a seraphic transport, a spaceship of pure light and spirit. Imagine helping that gently detach from a planet's pull just by by adjusting the gravitational fields around it. That's the level we're talking about here.

J John 09:50

Whoa. Talk about cosmic mechanics so they can, like, move planets around if they need to. It wouldn't

S Sarah 09:56

be a problem for them. They're also the ones who help maintain the energy flow. Between planets, star systems, that sort of thing. They're like, well, the best electricians in the universe, I

J John 10:04

guess. And with 30 types of energy to work with, I imagine specialization is a must, right?

S Sarah 10:09

You're right, and that's where the energy transformers come in these beings. They're the ultimate multitaskers. They can manipulate energy, obviously, but they can also store it. They can release it, they can even get this change it from one form to another. It'd be like, like being able to switch between different types of energy as easily as as changing channels on your TV. Wow.

J John 10:30

They make our energy companies here on earth look positively primitive. Okay, so we've got the Associate Directors making sure everyone's where they need to be. We've got the mechanical controllers moving planets and directing cosmic traffic. And we've got the energy transformers, well, transforming energy in ways we can only dream of any other key players in this cosmic orchestra. We should know about,

S Sarah 10:52
oh, we can't forget about the primary associators. Now, these beings are like, like living batteries, but instead of powering your phone, they're holding enough energy to, I don't know, jumpstart a supernova, no

J John 11:03
way. Yeah, it's a lot of energy. What do they do with all that power? Well, that's

S Sarah 11:07
where the secondary dissociators Come in. They're the ones who can take that stored energy and, well, basically convert matter back into energy. Think of them as the universe's ultimate power plant operators. Okay,

J John 11:19
now that is seriously impressive. But with all these incredible beings manipulating energy on such a grand scale, it makes you wonder, is there anything they can't do? Is there any force in the universe that even they have to respect to answer to? You know,

S Sarah 11:35
that's a question that the Urantia Book, it kind of dances around. It hints at. Force is so fundamental that even these master controllers, they have to acknowledge their boundaries,

J John 11:44
really. So even beings who can juggle galaxies and mess with gravity have to bow down to something, it seems

S Sarah 11:50
so the Urantia Book talks about something called the unqualified absolute. It's a concept that's notoriously difficult to wrap your head around, but it's described as a force, a presence that exists beyond our comprehension. It's the the foundation upon which everything rests, even even concepts like energy and power as as we understand them. So even

J John 12:11
the power directors, yeah, these incredible beings with their living mechanisms and and their mastery over energy, they ultimately answer to this unqualified absolute. It seems

S

Sarah 12:20

that even in the vastness of the cosmos, there are still forces that even the most powerful beings have to respect. It's

J

John 12:27

a humbling thought, isn't it, that even with all we're learning about the universe, about these incredible beings and the forces they command, there's still so much we don't know absolutely.

S

Sarah 12:35

But that's part of what makes it all so fascinating, isn't it, this constant journey of discovery. It

J

John 12:41

certainly is. Well, folks, we've journeyed from the familiar territory of angels and demons to the mind boggling realm of the universe power directors. We've explored their incredible hierarchy, from the seven supreme power directors to the billions of power centers, the mechanical controllers, the energy transformers, even those cosmic batteries, the primary associators and their partners in power, the secondary dissociators, and we've even glimpsed the edges of the ultimate mystery, the unqualified absolute. It's a lot to process, but that's the beauty of a good deep dive, isn't it? It leaves us with more questions than answers, but also with a sense of awe and wonder at the sheer scale and complexity of the universe. So until next time, keep exploring, keep questioning, and remember the universe is full of surprises for those who dare to look beyond the familiar.
