

Part 2, Paper 46, The Local System Headquarters, Archangel

📅 Wed, Oct 02, 2024 6:43PM ⌚ 15:26

SUMMARY KEYWORDS

Jerusalem metropolis, Urantia Book, energy signatures, master physical controllers, unique light cycles, merontia life forms, morontia beings, crystal walls, pearly gates, Melchizedek circle, angelic communication, spornaja creatures, sealed temple, cosmic principles, harmony balance

SPEAKERS

John, Sarah

J John 00:00
Welcome back everyone. You know, we talk about a lot of pretty wild stuff on this show we do, but I gotta say,

S Sarah 00:05
um, what's got you stumped,

J John 00:07
this whole Jerusalem thing? Yeah, it's really got my head spinning. It's

S Sarah 00:10
a big one.

J John 00:11
We've done deep dives before, but this time, it feels different, you know, like we're trying to wrap our heads around a place that makes the pyramids look like Lego projects. It's

S Sarah 00:19
definitely a different scale, exactly. Yeah

definitely a different scale, exactly. Yeah.

J John 00:22

And the Urantia Book, our trusty guidebook for all things cosmic, always full of surprises. It's giving us the inside scoop. And let me tell you this Jerusalem place, it's not what I expected. Forget pearly gates and fluffy clouds. We're talking about a system capital, more like a system metropolis, right, right? With its own laws of physics, unique life forms and a level of organization that would put our cities to shame. They've

S Sarah 00:47

had a long time to work on it, I guess so.

J John 00:49

And get this, it's divided into over 100,000 of these perfectly designed zones, zones,

S Sarah 00:56

zones, sectors, circles within circles. It's like they

J John 00:59

took city planning and blasted it into a whole other dimension. Well, they've got a lot of space to work with that they do. But speaking of space, the book mentions this thing called a Jerusalem mile, which is apparently seven times longer than our measly Earth mile. Makes

S Sarah 01:13

sense considering a scale of everything there, right?

J John 01:16

So how does anyone get around? Do they have, like, super speed walking shoes or something.

S Sarah 01:21

I think it goes beyond even our concept of speed. Okay, now you've

J John 01:25

J John 01:25
got to explain that, because they've mastered

S Sarah 01:27
energy and transportation on a level we can barely comprehend. Okay, imagine a society that doesn't think in terms of distances but in energy signatures. It's like they've tapped into the very fabric of their world and can move effortlessly through it.

J John 01:41
So instead of cars, it's all about it's more

S Sarah 01:44
about understanding the natural energy currents that flow through Jerusalem.

J John 01:47
Energy currents. Okay, now you're just messing with me, right?

S Sarah 01:51
I wish I was making this up, but the book mentions these master physical controllers. Imagine beings who can manage energy on a planetary scale. Talk about renewable resources. Hold

J John 02:02
on. Hold on. That is so no traffic jams, no power outages. I'm starting to think this Jerusalem place might be onto something, right? But if they don't have traditional days and nights like we do, what happens to all that energy is it just like permanently lit up like a disco ball? Well, you

S Sarah 02:18
have to remember, they have those unique light cycles instead of a 24

J John 02:21
hour day, right, right? They have the what do they call it? The quiet hour? The quiet hour, yeah. But what triggers those shifts, and how do they tell time without a sun to track? That's

S

Sarah 02:33

where the energy currents come in. Think of them like invisible rivers flowing through Jerusalem. These currents naturally fluctuate in intensity, creating those shifting light cycles. It's like their whole world breathes,

J

John 02:46

okay? I can kind of picture that. It's like a cosmic dimmer switch or something, right? Yeah. So imagine this. We're walking through Jerusalem, yeah, right, this soft, kind of diffused light all around us. What else do we see? What's the landscape like?

S

Sarah 02:59

Get ready for some serious wanderlust, because Jerusalem has mountains that would make Everest look like a molehill, no way. And because of how Jerusalem is formed, they don't have earthquakes or erosion like we do. We're talking about mountains that have stood for, well, probably forever, mountains

J

John 03:15

that never crumble. No, that's wild. Okay. What about water? Any oceans to surf in. You're

S

Sarah 03:21

more likely to find a lake to sail on. Lakes, yeah, instead of vast oceans, they've got countless shimmering lakes, all connected by crystal clear canals. And the coolest part, they don't even have rain, no rain.

J

John 03:34

So how do things grow during

S

Sarah 03:36

their quiet hour, a fine mist condenses in the air and settles over everything like a gentle planet wide dew. It's

J

John 03:44

like a spa day for the entire planet Exactly. This is starting to sound less like an afterlife and more like a luxury vacation. But can we even breathe there? What's the air like?

S

Sarah 03:53

This is where it gets really interesting. The Urantia Book describes Jerusalem's atmosphere as having the same three basic gas components, as Earth's atmosphere, oxygen and all that, plus one more element that makes it breathable for us as material beings. Okay,

J

John 04:07

that makes sense. But what about but here's the real kicker. What's that

S

Sarah 04:11

this unique atmosphere also supports what they call merontia life forms, beings that exist somewhere between the material and the spiritual

J

John 04:20

Meranti life forms, okay, you're gonna have to break that one down for me because I have no idea what that means. Meron Chia life forms, okay, you're gonna have to break that one down for me because I have no idea what that means, right?

S

Sarah 04:29

So morontia life forms, they're like, it's kind of like this on Earth, our atmosphere, it supports all kinds of life, right? Plants, animals, the works. But imagine an atmosphere that's fine tuned to support beings that aren't quite material, not quite spiritual, either. They're somewhere in between. Okay, you've

J

John 04:48

officially lost me. What does it even mean to exist between material and spiritual? Is that like being a ghost, not

S

Sarah 04:54

exactly think of it more like a transitional phase. You know, the Urantia Book talks about how. When we finish up here on Earth, our consciousness, our essence, it doesn't just poof, arrive at some final destination. It goes through stages, kind of like a school and morontia life forms, they're further along in that schooling, so

J

John 05:13

they're like the senior class, and we're down here in kindergarten, still figuring out how to use the safety scissors, something

S

Sarah 05:18

like that. And this unique atmosphere with that extra gas element, it allows them to interact with both the material and this higher vibrational level. Okay,

J

John 05:28

so we're talking about beings who are tuned into dimensions that are beyond our understanding, like having a sixth sense, but 1000 times more advanced

S

Sarah 05:36

Exactly, they can perceive things interact with things that are completely beyond our grasp right now. Yeah, and that fourth element in the air, that's their key wild.

J

John 05:45

So do we know what these morontia beings look like? Are we talking angels with wings or something even more out there?

S

Sarah 05:54

Well, the Urantia Book does describe various types of morontia life, really, and each one has its own unique appearance, its own role to play in the grand scheme of things. Some are more ethereal, radiant. Others have forms that we might recognize at least vaguely, but even then, trying to describe them with our limited language is like like trying

J

John 06:13

to explain the Internet to a caveman exactly her words just can't quite capture it. I guess that makes sense. Thanks. Okay, so we've got these advanced beings, a perfectly balanced ecosystem, a breathable atmosphere that's also some kind of cosmic energy drink for merantia, life forms. It's

S

Sarah 06:28

a lot to take in. It is,

- J** John 06:30
but let's talk housing. The Urantia Book keeps mentioning these circles. What are those all about? Is that where everyone lives in a way, yes,
- S** Sarah 06:36
think of it as a city designed not just for living, but for spiritual growth. So
- J** John 06:41
like a cosmic suburb, do I get a yard better than
- S** Sarah 06:45
a yard? Each circle is dedicated to a specific group of beings and their unique purpose? It's like specialized neighborhoods. Hold
- J** John 06:52
on. Hold on. You're saying there's a neighborhood for angels, one for those Melchizedek guys we keep hearing about. There
- S** Sarah 06:58
are circles for ascending mortals like us too. Should we ever reach that stage? Wait
- J** John 07:03
a minute, back up. We get our own spot on Jerusalem. Is it a guaranteed reservation or something? How does that work? Think
- S** Sarah 07:09
of it more as a potential destination, a possibility it's not guaranteed, but the fact that it's attainable, that we have that potential, that's pretty
- J** John 07:17
inspiring when you put it like that. But what are these circles actually like, are we talking mansions, high rise apartments? Give me the details.

S

Sarah 07:25

Forget about earthly architecture. Imagine this. Each circle has seven concentric rings, each one rising higher than the last. It creates this massive terraced effect. Okay, that's pretty impressive. What are they made of? Picture massive crystal walls shimmering under that soft, diffused light. And get this, the walls are pierced by 1000s of these Pearly Gates connecting each ring to the next.

J

John 07:48

Okay, now that's what I call an entrance. So what goes on in these circles is it all meditation and deep thought.

S

Sarah 07:55

There's certainly a lot of that, but each circle is also bustling with activity related to its resident's unique roles. For example, the Melchizedek circle. It's like a hub of education and guidance. The melchizedeks,

J

John 08:05

right those cosmic mentors who always seem to pop up at just the right moment in the Urantia Book. So their circle is like a giant library, then more

S

Sarah 08:14

like a living library. There are these incredible beings constantly seeking knowledge, sharing wisdom, helping those who are ready to receive it

J

John 08:22

so kind of like the librarians of the universe in a way, yes, and

S

Sarah 08:26

their role is crucial, especially for us, ascending mortals, trying to navigate the cosmos.

J

John 08:31

Makes sense. Okay, what about the angels? Are they really just hanging out on clouds, playing harps all day? Give me the angel scoop.

S Sarah 08:38
I'm sure music is part of it. Remember how we talked about energy? Well, the Urantia Book suggests that angels communicate and express themselves through forms of energy that we might experience as sound even

J John 08:49
as light. So they're like walking talking light shows. I can get behind that their

S Sarah 08:53
circle is dedicated to various forms of spiritual ministry. Think of them as maintaining the delicate balance of the universe, spiritual

J John 09:01
ministry. Does that mean they're like organizing those fundraising dinners for the cosmic symphony or something? Think more,

S Sarah 09:07
along the lines of ensuring that energy flows smoothly, that communication between realms remains open, that everything is aligned with the well, the divine plan. I guess you could say, Okay, that

J John 09:19
sounds like a pretty important job. No pressure there, right? But it makes you wonder, what other fascinating beings call Jerusalem home. Speaking of fascinating, what about those spornaja creatures? You know, the part horse, part dog ones. What's the deal with them? Ah, yes,

S Sarah 09:35
the spornaja. Now there's a testament to the creativity of the universe. Seriously,

J John 09:40
I'm trying to picture it a horse with the head of a golden retriever, or maybe it's the other way around.

S Sarah 09:44
It's more about the essence. Really, they have this incredible loyalty and intuition like a dog, but combined with the strength and grace of a horse. Okay,

J John 09:53
so majestic Andy cuddly, got it? Yeah? But what do they do?

S Sarah 09:58
Have you ever seen a perfectly. Manicured garden, and just thought, wow. How did they do that? All

J John 10:03
the time? My thumbs are definitely not green.

S Sarah 10:05
Well, the sponta are like the Master Gardeners of Jerusalem. They have this innate ability to sense energy flows, to work with plant life on a level that's beyond our imagination. They shape those breathtaking landscapes we were talking about earlier. So

J John 10:19
they're like the cosmic landscapers. That's actually pretty cool gig. But wait, you said earlier, they don't have individual souls like humans do. Does that mean they're just robots going about their business with no real consciousness? Not

S Sarah 10:31
at all. They're an essential part of the Jerusalem ecosystem. And the Urantia Book even hints that in some future universe age they might evolve into something even greater. Wow.

J John 10:41
So they're on their own journey, just like us. I love how the Urantia Book throws these curveballs about life and consciousness. It's like the more you learn, the less you realize you actually know

S Sarah 10:52
exactly, and it opens up these incredible possibilities. It really does. So we've

J John 10:56
talked about the circles, the different beings who live there, but there's one place on Jerusalem that's still a total mystery, the sealed temple. Even the Urantia Book is tight lipped about this one. What's the deal with that? Why all the secrecy the

S Sarah 11:10
sealed temple? Yeah, that's the biggest Enigma on Jerusalem. Wouldn't you say totally

J John 11:14
what's the point of having this incredible, advanced city, if there's a whole section that's off limits even to the residents. It makes you think it really does. What could possibly be so sacred, so top secret that even those living on Jerusalem aren't allowed in the book describes

S Sarah 11:30
it as a place of unimaginable sanctity. It's like a point of connection to realms so far beyond our understanding that even attempting to comprehend them would probably short circuit our brains. Okay,

J John 11:42
now I'm really curious. Yeah, but if the Urantia Book doesn't tell us what's inside, how are we supposed to even begin to understand it?

S Sarah 11:50
Maybe that's the point. Maybe it's a reminder that no matter how advanced we become, how much we learn, there are always going to be mysteries. The universe loves to keep us guessing, doesn't it? It certainly does. It's like this never ending story always unfolding, and just when we think we've got a handle on things,

J John 12:05
bam, another mystery pops up. But I'm curious, with everything we've learned about Jerusalem so far, all the amazing beings, the advanced technology, the sheer scale of it all, how does this relate to us down here on Earth? It's incredible, don't get me wrong, but is it really relevant to

relate to us down here on Earth? It's incredible, don't get me wrong, but is it really relevant to our lives right now? It's incredible, don't get me wrong, but is it really relevant to our lives right now? That's

S

Sarah 12:27

the question, isn't it? What does it all mean? It's easy to get swept away by the grandeur of it all, but the real magic is figuring out how this connects to us here and now on dead all Earth. Right?

J

John 12:39

It can't just be about memorizing cosmic facts and saying, Oh, that's nice. There's got to be more to it, right?

S

Sarah 12:44

Absolutely. Think back to how we were talking about Jerusalem being like a cosmic University,

J

John 12:48

yeah, with the melchizedeks as the librarians and whatnot,

S

Sarah 12:51

exactly. But it's not just about the information they have. It's about the principles Jerusalem embodies, harmony, balance, service to others. These aren't just celestial buzzwords, you know.

J

John 13:03

So you're saying we can apply those principles to our lives right here, even though we're stuck dealing with traffic and taxes and all that jazz. Think of it

S

Sarah 13:11

this way, if Jerusalem represents a higher level of existence, a more evolved way of being, then those principles are like guideposts on our own journey to get there.

J

John 13:21

Okay, I like where you're going with this. So you're saying that even amidst the chaos of

everyday life, we can be working towards that Jerusalem ideal.

S Sarah 13:29

Exactly. It's not about instant perfection, more like taking those little steps, making choices that align with those higher principles,

J John 13:35

like we're training for the cosmic Olympics, and Jerusalem is the gold medal, right? Love that

S Sarah 13:40

analogy. We might be in the early stages of training, but every step we take towards those ideals of harmony, service, understanding, it brings us closer, makes

J John 13:50

you think about all those little choices we make every day. Huh? Like maybe letting someone merge in traffic is part of the grand cosmic plan, you never

S Sarah 13:58

know. But seriously, the more we align ourselves with those Jerusalem principles, the more we're preparing ourselves for that level of existence, whether we realize it or not, it's like

J John 14:07

we're tuning our own personal radios to pick up the cosmic frequency right? The closer we get to that Jerusalem wavelength, the clearer the signal becomes,

S Sarah 14:16

beautifully put. And who knows what other frequencies are out there waiting for us to tune in, right?

J John 14:19

Because if Jerusalem is just the beginning, if this incredible city is just one stop on the cosmic tour bus,

S Sarah 14:26
what else is out there?

J John 14:27
Exactly, what wonders are we missing out on? I gotta say, even though we've barely scratched the surface of this whole Jerusalem thing, barely scratched the surface, it's got me thinking about things in a whole new way. It's like, yeah, life on Earth can be messy and confusing and downright frustrating sometimes, but there's a bigger picture exactly. There's this whole other level of existence out there, this incredible potential waiting to be unlocked. And the best part is we get to be part of it. We do all of us. That's a pretty amazing thought, isn't it? So to everyone listening, keep exploring. Keep those questions. Coming, and, most importantly, keep your minds open to the endless possibilities that await, because who knows, maybe one day we'll all be sipping cosmic cocktails on the crystal promenades of Jerusalem, sharing stories about our journey here. Now

S Sarah 15:14
that's a deep dive. I'd sign up for me too. But until then,

J John 15:17
thanks for joining us on this incredible journey through the cosmos. We'll see you next time for another deep dive into the mysteries of the universe.
